

**PROTECT YOUR INVESTMENT.
WITH COOLANT MEANT FOR YOUR EQUIPMENT.**

JOHN DEERE

Cool-Gard™ II Coolant Pre-mix 50/50

Cool-Gard II is proven to protect for up to 6 years or 6,000 hours*, so you may even trade your equipment before you change your coolant. It's engineered right alongside your equipment, so it can stand up to the harsh conditions you face in the field. There's no guessing, no trial and error. It's guaranteed to meet the exact requirements of your machine.

Avoid downtime with Cool-Gard™ II advanced formula

Harmful deposits can restrict flow to the radiator and slow you down. Unlike many of our competitors, we make Cool-Gard II nitrite-free to prevent this type of buildup from happening. Our advanced formula also protects your system components for an extended period, allowing for greater efficiency, less downtime and lower maintenance costs.

Protect your entire fleet

It doesn't have to be a John Deere machine to get John Deere protection. Cool-Gard II can protect any liquid-cooled engine.

Use Cool-Gard II for:

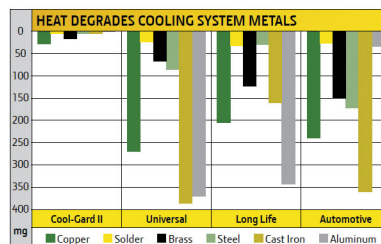

- On-highway vehicles
- Irrigation pumps
- Generators
- Compressors
- Any other liquid-cooled engine

KEY BENEFITS

- A service life up to six years or 6,000 hours
- Superior protection against corrosion and deposits
- A prolonged water pump life
- Minimized liner cavitation
- Thermal stability for advanced engine technology
- A guarantee to exceed all requirements of ASTM D6210

Proven protection for your cooling system

Test results from JDQ-1522 thermal oxidative stability test. Coolants and metals are agitated and exposed to 300 °F (148 °C) for an extended period. Compare how Cool-Gard II protects cooling system metals from corrosion. Longer bars mean more loss of material.

Cool-Gard II engineers see the challenges engine cooling systems face every day in test cells and in field tests. And to make sure John Deere develops the best coolant to protect against these conditions, we've put Cool-Gard II to very aggressive high-heat tests. The chart to the left compares how Cool-Gard II protects common cooling system metals under extreme, high-heat conditions with how other coolants protect under the same conditions. The metals protected by Cool-Gard II lost less mass than those protected by other coolants.

*Rating applies when complete cooling system flush is performed prior to use.

Genuine reliability. Genuine productivity. Genuine John Deere parts.
